

2022 Federal Employee Viewpoint Survey

Public Release Data File

Compressed File Contents:

- 2022_OPM_FEVS_PRDF.csv – Comma-delimited (CSV) Federal Employee Viewpoint Survey (FEVS) data file.
- 2022_OPM_FEVS_PRDF_Codebook.xlsx – Excel file containing information and context about the data.
- 2022_OPM_FEVS_PRDF_Read_Me.docx – Information about the CSV data file

What's New in 2022?

Like the previous year, there were several changes to the 2022 OPM FEVS.

First, a new Diversity, Equity, Inclusion, and Accessibility Index has been added to the survey which includes new items. Items in this index and the four subindices are identified in the included Codebook.

Second, the survey administration was reset back to the late Spring administration that was the norm prior to the COVID-19 Pandemic issues. Survey opened the week of May 30th and closed July 22. This context is important to remember when examining any results in the survey.

Third, the survey in 2022 was back to being a census. More information can be found in the 2022 Technical Report when available.

Fourth, the 2022 OPM FEVS is the first year we have used negatively worded questions. Items 12 and 34 are worded such that the “Disagree” response choices are positive responses and the “Agree” response choices are negative. This note has been made in the Codebook.

As for changes to our Public Release Data File practices, nothing has changed since last year. The same demographic information appears, and the same process was used to mask sensitive data. This masking process will be laid out in the 2022 Technical Report when available.
